

ABSTRACT OF THE DISCLOSURE

A post urination drip collector includes a tubular member having a
5 first end, a second end and a perimeter wall extending between the first
and second ends. The first and second ends are open. A cap member is
integrally coupled to and covers the second end such that a housing is
defined. An absorbent material is attached to and substantially covers an
inner surface of the cap member. The housing is removably positioned
10 over a penis to collect any post urination dripping that may occur.
